

SYSTEM AND METHOD FOR EFFECTIVELY PERFORMING
A STREAMLINED PHOTO DISTRIBUTION PROCEDURE

5

ABSTRACT OF THE DISCLOSURE

A system and method for effectively performing a streamlined photo distribution procedure may include a photo data source that provides photo data to a source device in an electronic network. A source photo manager of the source device may be utilized to designate one or more message targets for receiving the photo data from the source device. A source mail program may access the photo data to automatically create a photo message that includes the photo data and photo identifier means to request special handling of the photo data. The source mail program may then automatically transmit the photo message over the electronic network to be downloaded by a target mail program of a target device corresponding to the foregoing designated message target. The target mail program may automatically detect the photo identifier means in the photo message, and may responsively provide the photo data to a target photo manager of the target device for automatic storage into a target photo album of the target device.
